

Premium Employee Security Training

Award-winning video content to enhance your employee training efforts

Educate Your Employees About Email Security

Your employees are overwhelmed with the number of emails they get each day and struggle to make informed decisions on whether or not any one particular email poses a threat to the organization or not. Criminals are taking advantage of this by blasting out billions of malicious emails a day and using increasingly sophisticated methods of tricking end users into doing something that will result in their company being exposed to attack. Next generation email security tools are critical to identifying and removing these emails at scale, but employee training remains a critical component to defending against email attacks as well. At IRONSCALES, we provide both capabilities from our single platform.

Training Is Built In To Your Service

We're committed to helping you attain and maintain company-wide excellence in identifying phishing emails by providing a single, unified email security solution that combines the best of artificial and human intelligence. As part of that commitment, the IRONSCALES SaaS platform delivers a robust set of training features. We make simulations and user training for phishing detection more fun and engaging for improved user participation and results.

Unlike the traditional one-size-fits all approach, we start with an initial employee assessment to benchmark individual users' phishing recognition skills. Follow-on training campaigns use short, staged, real-world phishing attacks to improve the employees' awareness of malicious email messages. Users then "graduate" to higher levels of proficiency based on performance.

Premium Training For An Enhanced Employee Experience

We believe that training doesn't have to be boring. In fact, it can be quite entertaining. That's why we're pleased to offer premium training content from our handpicked set of partners that will allow you to provide your employees with a positive learning experience. Videos are offered in a number of styles, from anime to puppets to live action video.

For Telit, it is almost impossible to train all our employees without IRONSCALES.

ITZIK MENASHE,
GLOBAL IT DIRECTOR

We Work With Today's Modern Email Platforms

Our email security service is designed to come to you and to scale at the pace of your business. Using our native API integrations, you can deploy IRONSCALES in just minutes with no configuration changes, risk or downtime to your operations.

About IRONSCALES

IRONSCALES is a self-learning email security platform that can predict, detect and respond to email threats within seconds.

Email threats are growing exponentially and morphing at scale. Each day, billions of new, increasingly sophisticated phishing attacks and launched globally. Legacy technologies like security email gateways (SEGs) have been shown to allow up to 25% of incoming phishing attacks through to their intended targets.

With IRONSCALES, you and your organization are Safer Together because of the following:

- Advanced malware/URL protection
- AI-powered Incident Response
- A virtual security analyst
- Mailbox-level Business Email Compromise (BEC) protection
- Democratized real-time threat detection
- Gamified, personalized simulation and training

With IRONSCALES, We Are Safer Together

Our advanced email threat protection platform works alongside your existing systems and architecture and can be deployed globally in minutes. Our comprehensive AI-Solution offers protection and security, at scale.

Stop phishing attacks today – schedule a live demo and a free 14-day trial.

We will put our platform against any other solution in the marketplace.
